**Question 1**

Try all the sample codes that have been discussed in class.

**Question 2**

Given a table books containing information about books such as book\_isbn(PK), book\_title, book\_author, book\_year, book\_price and book\_category.

- Write the PHP code to fetch the UNIQUE categories from the table books and display as an ordered list on a web page.
- Write the PHP code to fetch the UNIQUE categories from the table books and display in a combo box on a web page.
- Write the PHP code such that when a user selects any option from the combo box and clicks on the button 'Fetch Books' ALL book details of the selected category are displayed.
